

# SolMeme Trading Playbook

Use this playbook with the SolMeme Dashboard. Follow rules strictly and manage risk.

## 1) Hunt Early Momentum

- Refresh every few seconds and identify coins entering Top 30 for the first time.
- Target coins with 1h change between +20% and +50%, and 24h < +100%.
- Avoid coins already up 500%+.

## 2) Confirm the Trend

- Open 24h chart, look for higher highs and rising volume.
- Avoid single giant spike candles; ensure liquidity > \$100k if possible.

## 3) Social Proof Check

- Check the token's Twitter feed in the side panel.
- Look for multiple accounts posting organically; avoid dev-only posts.

## 4) Entry & Position Sizing

- Initial entry: 2-5% of trading capital.
- Add another 2-5% if price rises 15-20% with continued hype.
- Cut losses at -10% from entry.

## 5) Profit Taking

- Take 50% profits at +30-50%.
- Use trailing stop for remaining position; keep a small moon bag.

## 6) Avoid Traps

- No illiquid tokens; avoid tokens with very low liquidity.
- Be careful with tokens that have only single-holder activity.

## 7) Record & Review

- Log every alert and trade in the Trade Log and review daily.

Notes: Meme coin trading is high-risk. This is not financial advice.
